Product: Sakinah - Islamic Companion

Document status: As Built with implementation-status labels

Version: 1.0 | Date: 2026-09-07

1. Product title and pitch

Sakinah is an installable, mobile-first Islamic companion that brings Quran study, Hadith, prayer support, remembrance, and daily guidance into one calm web application.

2. Executive summary

Sakinah serves guests and registered Muslims on Android, iOS, and desktop browsers. Guests can use most content locally; registered users can sync supported bookmarks and Tasbeeh records through an account. The product is delivered as a Progressive Web App (PWA), with an install gate in browsers and first-run onboarding in standalone mode.

3. Purpose and problem

Islamic resources are often distributed across unrelated websites and apps. Sakinah reduces switching by placing worship utilities, source content, personal progress, and shareable reminders under a consistent interface. It addresses discoverability, mobile convenience, location-aware prayer support, and continuity across sessions.

4. Target users and stakeholders

- Muslims seeking a daily Quran, Hadith, prayer, Dua, and Dhikr companion.
- Learners who want topical Quran references, recitation, and structured lessons.
- Travellers needing local prayer time and Qibla assistance.
- Guests who prefer no account.
- Registered users who need supported cloud synchronization.
- Product owner, content reviewers, support contact, Supabase/Vercel operators.

Roles

Role	Capabilities
Guest	Browse content; use utilities; retain selected data locally in the browser
Authenticated user	Guest capabilities plus supported Supabase synchronization
Administrator	Not implemented or verified from repository

5. Pain points addressed

- Multiple disconnected religious tools.
- Loss of progress between visits.
- Difficulty finding Quran passages by topic or location.
- Static prayer schedules that do not follow current coordinates/date.
- Poor mobile readability and lack of installable access.

6. Current scope and modules

Module	As-built capability	Status
Home	Live prayer banner, search handoff, Ayat card, Flashes, quick actions, Hajj/Umrah entry	Implemented
Quran	Surah/Juz browsing, Arabic/Urdu/English editions, recitation, bookmarks/favorites, 15/16-line visual modes, subjects, 38 lessons	Implemented with provider dependency
Seerat-un-Nabi	Seven seasons and episode launcher using one YouTube playlist	Partially implemented/content-dependent
Hadith	Eight collections, collection → topic → Hadith flow, language controls where provider data exists, share/save	Implemented with translation/provider limitations
Prayer	Geolocation, current-date AlAdhan calculation, next-prayer countdown, reminder controls	Implemented; background reliability platform-dependent
Qibla	Coordinate bearing plus device orientation	Implemented; sensor accuracy platform-dependent
Tasbeeh	Presets, vibration, target progress, local history, custom Tasbeeh and optional user sync	Implemented
Books	Categorized visual library and reader-oriented entries	Partially implemented; complete licensed book corpus/download verification absent
Duas	Local Hisnul Muslim dataset and fallback content	Implemented; corpus completeness not independently verified
Ibadat	Salah, fasting, Hajj, Umrah, Janaza guidance cards	Implemented as concise guidance
More	Flashes, Duas, Salah, Qibla, 99 Names, Shahadat, Waqf, Tasbeeh, Books	Implemented
Account	Email/password, reset, Google OAuth, session persistence, profile summary	Implemented; remote provider settings not repository-verifiable
PWA	Manifest, install UI, offline fallback, versioned updates	Implemented

7. Out of scope

- Native App Store/Play Store binaries.
- Payments, subscriptions, commerce, or advertising.
- Admin console or editorial CMS.
- Social network, public profiles, or user-to-user messaging.
- Scholarly certification of third-party religious content.
- Guaranteed background Azan execution when the OS suspends a PWA.
- Server-owned push campaign scheduler.
- Dedicated book-file storage/download service.

8. Functional requirements

- PRD-FR-01: The browser view shall present installation guidance; standalone first run shall present onboarding.
- PRD-FR-02: Users shall navigate Home, Quran, Hadith, Ibadat, and More from the bottom bar.

- PRD-FR-03: Every primary view shall retain access to the header menu and persistent prayer banner.
- PRD-FR-04: The Quran experience shall support Surah/Juz selection, translations, recitation, reading preferences, favorites, and last-read markers.
- PRD-FR-05: Hadith navigation shall proceed collection → chapter/topic → Hadith.
- PRD-FR-06: Prayer times and Qibla shall use current permitted coordinates.
- PRD-FR-07: Tasbeeh shall count taps, support reset/history, and allow bounded custom records.
- PRD-FR-08: Guests shall be usable without account creation.
- PRD-FR-09: Authenticated ownership data shall be limited to its owner.
- PRD-FR-10: The application shall expose light/dark preference and install/update behavior.

9. Non-functional requirements

- Mobile-first presentation within a 560 px application shell on wider displays.
- Installable standalone PWA over HTTPS.
- Current application code fetched reliably with offline fallback.
- Arabic-capable typography and readable translation layouts.
- Security headers, strict input bounds, RLS ownership, and no frontend secret keys.
- Graceful loading, empty, error, and permission-denied states where implemented.
- No guarantee of offline availability for every third-party corpus item.

10. User stories

- As a guest, I want to explore without registering, so that I can evaluate the companion privately.
- As a reader, I want Urdu or English Quran translation, so that I can understand an Ayah.
- As a learner, I want a lesson to open its exact Ayah, so that study remains contextual.
- As a worshipper, I want local prayer times, so that the schedule fits my location.
- As a traveller, I want a Qibla bearing, so that I can orient prayer.
- As a registered user, I want saved bookmarks, so that supported progress follows my account.
- As a Dhikr user, I want a custom Tasbeeh, so that I can use my own title, meaning, target, and image.
- As a mobile user, I want Home Screen installation, so that Sakinah launches like an app.

11. Business rules

- Guest data is local and can be lost if browser/app storage is cleared.
- Cloud rows must be owned by the authenticated Supabase user.
- Custom images are JPG/PNG/WebP and no larger than 1.5 MB.
- Custom targets are integers from 1 to 100,000.
- Prayer calculation uses AIAdhan method 2 and school 0 for all users.
- Fiqh-specific filtering is not present.
- Third-party content remains subject to provider availability and licensing.

12. Assumptions and constraints

- Users grant geolocation, notification, and orientation permission when needed.
- Network access is needed for uncached provider content.
- iOS installation is initiated through Safari Share → Add to Home Screen.
- Browser/OS policies may prevent exact background reminder delivery.
- Supabase and OAuth Dashboard configuration is managed outside this repository.

13. Success criteria

- Production build completes without error.
- Security regression suite remains 100% passing.
- All 114 Surahs and Juz 1–30 can be requested from the provider within validated ranges.
- A permitted location yields current-date prayer data or a clear recoverable error.
- Guest launch does not require account creation.
- Authenticated cross-user database access is denied by RLS in an owner-run two-account test.
- PWA manifest and service worker are served with correct types/cache policy.

14. Known limitations

- No repository-owned backend or distributed notification scheduler.
- Complete book downloads are not verified.
- Some Hadith Urdu/Arabic availability depends on matching remote editions.
- “15-line/16-line” is a CSS reading mode over provider pages, not verified photographic Indopak pagination.
- Seerah uses playlist indexing rather than a repository-managed episode catalog.
- Account deletion/export is absent.

15. Glossary

Term	Meaning
Ayah	A Quran verse
Surah	A Quran chapter
Juz/Para	One of 30 Quran divisions
Hadith	Narration about the Prophet's teachings/practice
Dhikr/Tasbeeh	Remembrance and counting practice
Qibla	Direction of the Kaaba for prayer
PWA	Installable web application with manifest/service worker
RLS	Database Row-Level Security
